Subject: New Legacy Data Deletion Module in Placement Management

As per instructions from MoRD, we have introduced a new sub-module called "Legacy Data Deletion" within the Placement Management module to address this.

Cases where this applies:

1. Excess legacy data approved.
2. Excess samples marked.
3. Incorrect samples marked.
4. Incorrect target/notification selected.
5. Other issues not listed above.

Process Flow:

1. The PIA OP team can request legacy data deletion through the "Placement Management Module - Legacy Deletion Sub-Module" to the SRLM OP team.
2. After receiving approval from the SRLM OP team, the entire legacy data (including samples, if available) for a specific installment will be deleted.
3. The PIA OP team can then resubmit the corrected data from the Placement Legacy Module, including the Notification, installment number, and actual target for the concerned installment (new parameter added).
4. Once the SRLM OP team approves the corrected data, the updated numbers will be reflected in the KB and subsequent reports.
